

EASY SET™ PATENTED QUICK CHANGE TOOL

The innovative, Easy Set™ Patented Quick Change Tool provides a quicker, easier and safer way to change out crimp dies. Traditional quick change tools must be manually centered and carefully held in place during the die changing process. Even a slight misalignment could cause the dies to be slightly out of place, potentially causing costly damage to the dies or the machine itself. However, the Easy Set™ Quick Change Tool's patented centering guides hold the tool in the correct position throughout the die changing process with minimal user effort, eliminating the risk of user error.

Master dies are guided through built-in channels on the tool on mid-sized crimpers.

Tool held in place by built-in locking posts inserted into the crimper on smaller and larger sized crimpers.

CLEANING AND LUBRICATION KIT

Available for the KC1-H130, KC3-H130, KC1-H135, KC3-H135, KC3-H144 & KC3-H170.

Proper crimper maintenance will extend the life of your machine. This involves routinely changing out the used oil, as well as cleaning and lubricating beneath the master dies. This process can be quite messy and time consuming, however the Cleaning and Lubrication Kit includes all the tools necessary for a quick and easy process that can be completed in under 30 minutes.

- A. Master Die Extending Tool** – Holds the master dies in a position slightly pulled away from the cylinder, allowing access to the area beneath for cleaning and lubricating.
- B. Spray Gun and Solvent** – Allows for easy spray cleaning beneath the master dies.
- C. Lubrication Gun** – Allows for easy lubricating beneath the master dies.
- D. Oil Drain Hose** – Connects to an opening on the bottom of the hydraulic cylinder, providing a drain line for used oil.
- E. Lifting Wedges** – Props the machine up from behind, draining the used oil through the front of the machine through the drain hose.
